Introduction

The 1986 Statistical Annual has been published in three volumes. Two volumes contain volume, open interest, and price data for financial futures/options and agricultural futures/options. The third book contains market commentaries, cash prices, and other fundamental trade data. In past years, the Statistical Annual was published in one or two volumes, and the trade data was placed in the appropriate book.

Highlights

	Wheat futures **Chicago Board of Trade**
Basic trading unit	5,000 bushels
Deliverable grade	No. 2 Soft Red Winter, No. 2 Hard Red Winter, No. 2 Dark Northern Spring, No. 1 Northern Spring, and substitutions at differentials established by the Exchange

Highlights

Options on Wheat futures
Chicago Board of Trade

Basic trading unit	One CBOT Wheat futures contract of 5,000 bushels
Description	At any time prior to expiration, the buyer of one wheat futures call (put) option may exercise his call (put) option to assume a long (short) position in one wheat futures contract of a specified contract month at a strike price set when the call (put) option was bought. Upon exercise, the seller of one wheat futures call (put) option assumes an opposite short (long) position in one wheat futures contract.
Strike price	Strike prices will be listed in integral multiples of 10 cents
Premium payment	Premiums must be paid in full by each clearing member to the Clearing Corporation and by each option customer to his commission merchant when the option is bought, or within a reasonable time period thereafter.
Price quotation	Increments of ⅛ of a cent per bushel or $6.25 per contract
Daily price limits	Twenty cents per bushel above or below the previous day's settlement premium
Exercise	The option buyer may exercise his option on any trading day prior to expiration. The Clearing Corporation assigns overnight a futures position to the buyer and an opposite futures position to the seller at the strike price.
Last trading day	Wheat futures options cease trading at 12:00 noon on the last Friday preceding the first notice day for the corresponding wheat futures contract by at least five business days.
Expiration	Unexercised options expire at 10:00 a.m. on the first Saturday following the last day of trading. After the close of trading on the last day of trading, each long option for which the exercise price is at least twenty cents per bushel greater in the case of the put, or less in the case of the call, than the underlying futures price shall be automatically exercised, unless notice to cancel automatic exercise is given to the Clearing Corporation.
Hours of trading	9:30 a.m. to 1:15 p.m. Chicago time
Ticker symbols	WY calls WZ puts

Highlights

Options on Corn futures
Chicago Board of Trade

Basic trading unit	One CBOT Corn futures contract of 5,000 bushels
Description	At any time prior to expiration, the buyer of one corn futures call (put) option may exercise his call (put) option to assume a long (short) position in one corn futures contract of a specified contract month at a strike price set when the call (put) option was bought. Upon exercise, the seller of one corn futures call (put) option assumes an opposite position in one short (long) corn futures contract.
Strike price	Strike prices are listed in integral multiples of 10 cents per bushel
Premium payment	Premiums must be paid in full by each clearing member to the Clearing Corporation and by each option customer to this commission merchant when the option is bought, or within a reasonable time thereafter.
Price quotation	Increments of ⅛ of a cent per bushel or $6.25 per contract
Daily price limits	Ten cents per bushel above or below the previous day's settlement premium
Exercise	The option buyer may exercise his option on any trading day prior to expiration to assume a position at the strike price in the corn futures market. The Clearing Corporation assigns overnight an opposite futures position at the strike price to the option seller.
Last trading day	Corn futures options cease trading in the month prior to the futures contract delivery month. Options stop trading at 12:00 p.m. on the last Friday that precedes, by at least ten business days, the first notice day for the corresponding corn futures contract. Beginning with the September 1987 contract, options will stop trading at 12:00 p.m. on the last Friday that precedes, by at least five business days, the first notice day for the corresponding futures contract.
Expiration	Unexercised corn futures options shall expire at 10 a.m. on the first Saturday following the last day of trading. After the close of trading on the last day of trading, each open long option for which the exercise price is at least ten cents per bushel greater in the case of the put, or less in the case of the call, than the underlying futures price shall be automatically exercised, unless notice to cancel automatic exercise is given to the Clearing Corporation.
Hours of trading	9:30 a.m. to 1:15 p.m. Chicago time
Ticker symbols	CY calls PY puts

Highlights

	Options on Soybean futures **Chicago Board of Trade**
Basic trading unit	One CBOT Soybean futures contract of 5,000 bushels
Description	At any time prior to expiration, the buyer of one soybean futures call (put) option may exercise his call (put) option to assume a long (short) position in one soybean futures contract of a specified month at a strike price set when the call (put) option was bought. Upon exercise, the seller of one soybean futures call (put) option assumes an opposite position of one short (long) soybean futures contract.
Strike price	Strike prices will be listed in integral multiples of 25 cents (e.g., $7.25, $7.50, etc.)
Premium payment	The premium must be paid in full by each clearing member to the Clearing Corporation and by each option customer to his commission merchant when the option is bought, or within a reasonable time period thereafter.
Price quotation	Increments of ⅛ of a cent per bushel or $6.25 per contract
Daily price limits	Thirty cents per bushel above or below the previous day's settlement premium
Exercise	The option buyer may exercise his option on any trading day prior to expiration to assume a position at the strike price in the soybean futures market. The Clearing Corporation assigns overnight an opposite futures position at the strike price to the option seller.
Last trading day	Soybean futures options cease trading in the month prior to the futures contract delivery month. Options stop trading at 12:00 p.m. on the last Friday that precedes, by at least ten business days, the first notice day for the corresponding soybean futures contract. Beginning with the September 1987 contract, options will stop trading at 12:00 p.m. on the last Friday that precedes, by at least five business days, the first notice day for the corresponding futures contract.
Expiration	Unexercised soybean futures options shall expire at 10:00 a.m. on the first Saturday following the last day of trading. After the close of trading on the last day of trading, each open long option for which the exercise price is at least 30 cents per bushel greater in the case of the put, or less in the case of the call, than the underlying futures price shall be automatically exercised, unless notice to cancel automatic exercise is given to the Clearing Corporation.
Hours of trading	9:30 a.m. to 1:15 p.m. Chicago time
Ticker symbols	CZ calls PZ puts

Introduction

The 1986 Statistical Annual has been published in three volumes. Two volumes contain volume, open interest and price data for financial futures/options and agricultural futures/options. The third book contains market commentaries, cash prices and other fundamental trade data. In past years, the Statistical Annual was published in one or two volumes, and the trade data was placed in the appropriate book.

Chart Removal Guide

Several charts that were in previous Annuals have been removed from this Statistical Annual. The following is a list of these charts and the source of each. If you have any questions, please contact the Market Information Department at 312-435-3636.

Market Commentaries

This section contains market commentaries for both the financial and agricultural markets of 1986. The reports review market activity, trends, and government policies that influenced each market.

Introduction

In 1986, producers saw declining prices, a mixed export picture, and continued high production of feedgrains and soybeans. These factors contributed to the further decline in prices for most agricultural commodities traded at the Chicago Board of Trade. A controversial new Farm Bill that was introduced in 1985 was passed after eleven months. Various changes in the Farm Bill, from a marketing loan to mandatory acreage controls, received coverage from the press, but not enough legislative support to induce action. Prices traded in ranges near loan rates as the marketplace waited for possible changes in government farm policy.

Production

Production levels of corn, wheat, and soybeans were lower in 1986 than in 1985. Corn production declined 7 percent to 8.25 billion bushels from the record 8.9 billion bushels produced in 1985. Soybean production declined 4.4 percent to 2 billion bushels, less than the 2.1 billion bushels from the previous year. Production of all wheat decreased 14 percent to 2.1 billion bushels in 1986 from the 1985 level of 2.4 billion bushels. Soft Red Winter wheat production declined 21 percent in 1986 to 290 million bushels, from 1985 production of 368 million bushels.

Projected 1986/1987 carry-over stocks of corn, soybeans, and wheat were also a factor weighing on the decline in prices. Corn carry-over stocks were an estimated 5.7 billion bushels, which analysts estimate to be an eleven-month supply. Soybean ending stocks were an estimated four-month supply at 1.98 billion bushels. the carry-over for all wheat was at 1.9 billion bushels, an eleven-month supply.

DAILY NEAREST FUTURES

Volume

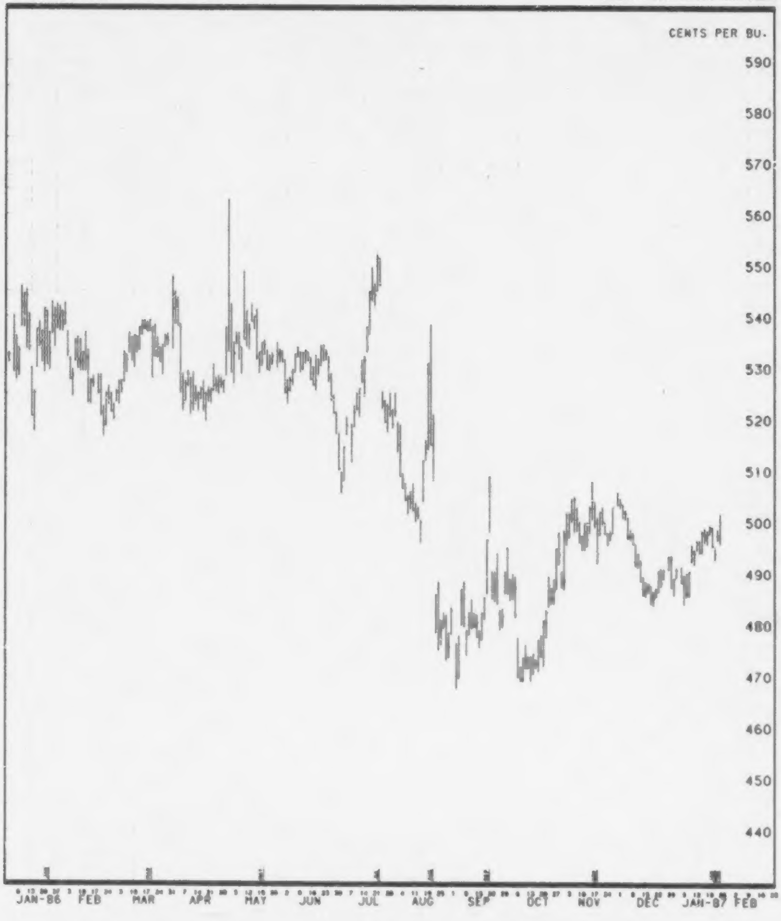
Declining exports and a global surplus of commodities contributed to a drop in trading volume of Chicago Board of Trade agricultural futures. Trading in corn futures declined 3.6 percent in 1986 to 6,160,298 contracts from 6,392,812 in 1985. Open interest declined 2.7 percent to 121,098 contracts at year end from 124,416 the previous year. Soybean futures volume declined 17.0 percent to 6,133,668 from 7,392,128 in 1985. Open interest increased 1.5 percent as of December 31, at 78,442, up from 77,274. Volume in wheat futures also declined slightly to 2,090,316 in 1986 contracts from 2,127,962 in 1985, a loss of 1.8 percent. Volume for the Chicago Board of Trade oats contract soared over 42 percent to 140,925 contracts from the 1985 figure of 99,024. Volume for soybean meal decreased 3.7 percent to 234,789 from 243,902. Open interest in that contract increased over 20 percent as of December 31 to 56,475 contracts from 46,875 in 1985. Soybean oil trading volume fell 6.7 percent to 259,600 from 278,352 in 1985. Open interest, however, increased almost 32 percent at year end to 63,797 contracts from the previous year's figure of 48,361.

Volume for the CBOT agricultural options contracts was mixed. Corn options volume rose 58.3 percent to 575,634 contracts from 363,549 contracts the previous year. The introduction of wheat options was successful since its inception in November. The options on soybean futures volume declined 7.8 percent to 775,139 contracts from

SOYBEANS

DAILY NEAREST FUTURES

CHICAGO BOARD OF TRADE



840,786 in 1985. In the first quarter of 1987, the CBOT planned to add soybean oil and soybean meal options contracts, increasing the number of agricultural options contracts to five.

Exports

During the late 1970s, exports of American agricultural products soared as new markets opened up, production declined in some parts of the world and the U.S. dollar was relatively weak. The 1980s have seen a decline in agricultural exports, in part due to record global production and a strong U.S. dollar. In 1986, exports continued to decline as surpluses, both domestic and foreign, grew. Traditional U.S. markets are experiencing fierce competition from foreign producers such as Australia, Argentina, and the Common Market. Traditional customers such as the U.S.S.R. and China either produced enough to meet their domestic demands or turned to other sources for their needs. Lower prices for U.S. commodities and the sharp decline in the U.S. dollar had little effect on increasing exports.

For the current marketing year, exports of wheat, corn, soybeans, soybean meal, and soybean oil were mixed. Exports of all wheat for the 1986/1987 marketing year through December 1986, showed a gain of 64 million bushels from the previous year. Exports of Soft Red Winter wheat increased 1.6 percent in the current marketing year from the previous year's depressed level.

Through December of the current marketing year, corn exports were off 25 percent from 1985. The absence of traditional corn buyers such as the U.S.S.R. has been a significant factor in 1986. Soybean exports showed a gain of 46 million bushels or 19 percent during the current marketing year through December. Soybean meal exports increased 16 percent in the current marketing year as increased demand for protein feeds from the EEC boosted exports. Soybean oil exports declined 16.2 percent from 63.6 million tons to 53.3 million tons.

Agricultural Policy

In 1986, the Farm Bill that took eleven months to pass (and was in place less than a year) came under heavy criticism. Expenditures for the first three years of the Bill were expected to run $52 billion. In 1986 alone, the amount was $25 billion. In an effort to reduce expenditures, the Administration has proposed reducing target prices by 10 percent in the years 1988 thru 1990. The idea of decoupling is also under consideration. This would allow the USDA to pay farmers income support payments based on a percentage of their historical yields and would give producers flexibility in planting decisions.

The government's plan to lower loan rates to world levels in the hope of increasing exports ran into stiff resistance from other countries, most notably, those of the EEC. The inability to formulate a cohesive agricultural policy continues to affect production, farm program expenditures, and government involvement.

The passage of the Gramm-Rudman Balanced Budget Bill has pressured the government to cut expenditures in all programs. Farm policy will continue to come under intense scrutiny. The government must cut costs to stay within Gramm-Rudman guidelines and allow the prices of U.S. agricultural commodities to fall near or below competitive levels in the global marketplace.

Introduction

The Chicago Board of Trade not only remained the leader of the futures industry in the United States but also reached the once impossible dream of trading 100 million contracts in one year. The 1986 CBOT total, 100,813,833 contracts, surpassed the 1986 volume totals of the next three futures exchanges combined.

Declining interest rates along with moderating inflation sparked the biggest bond rally since the inception of the CBOT U.S. Treasury Bond futures contract. Yields fell to their lowest levels in almost a decade. (An all-time high for any T-bond contract, 105 15/64, was reached at the start of the second quarter.) Volume activity was also brisk. However, as the year progressed, volume activity tapered and price activity moved in a sideways pattern. Nonetheless, as interest rate futures market volume expanded by 29.5 percent over 1985, the CBOT remained the industry leader.

Several interest rate futures contracts traded at the CBOT reached record volume levels; most notable were the U.S. T-bond and U.S. Treasury note futures contracts with record volume levels of 52,598,811 million and 4,426,476 million contracts, respectively. The T-bond futures contract represented 87.3 percent of the U.S. interest rate futures market.

T-bond futures traded a record 5,220,012 million contracts in February while T-note futures monthly record volume was set in June at 470,348 contracts. A daily volume record of 40,371 contracts was set in T-notes on September 12, 1986.

Furthermore, the CBOT remained the industry leader in the options on futures market with a 61.9 percent stake in the market. The CBOT volume leader was options on T-bond futures with a 54.7 percent share of the market. Daily, monthly, and annual volume records were set in 1986: 171,120 on January 9, 1,927,061 million in April, and 17,314,349 million for 1986. volume in options on T-note futures has also been increasing in 1986. Daily, monthly, and annual volume records included: 15,274 on August 12, 133,297 in August, and 1,000,682 million contracts for the year.

Fiscal Policy and the Reagan Administration

The financial markets dealt with another massive federal budget deficit during fiscal 1986. Although the Reagan Administration projected a $174.5 billion deficit, the actual figure amounted to $220.7 billion, a second consecutive record. The White House looked toward the Gramm-Rudman-Hollings Balanced Budget Amendment as a guide to reduce the federal budget deficit. However, a three-judge District Court unanimously ruled the new law unconstitutional. the Supreme Court concurred and ruled the automatic spending cut mechanism illegal since it violated the separation of power doctrine. That key component of the Gramm-Rudman-Hollings statute allowed the Comptroller General Office, removable by Congress, to make the necessary spending cuts should the President and Congress fail to do so. The Supreme Court cited that this new law improperly assigned executive powers of executing laws to a congressional body. In any case, the credit market remained confident that Congress and the President would work diligently to reduce the federal budget deficit.

The Reagan Administration also waged war against the cumbersome U.S. trade deficit. U.S. Treasury Secretary James Baker on several occasions "talked" down the U.S. dollar against major foreign currencies. Baker frequently spoke of the Administration's desire for an orderly dollar decline. As the dollar drifted lower, White House statements indicated satisfaction. A lower dollar would help boost the declining export component of the U.S. merchandise trade balance while avoiding mounting protectionist pressure from Congress. Despite continuous record-breaking postwar lows in the U.S. dollar against major foreign currencies, the trade deficit widened to record levels. Although the U.S. greenback declined 30 percent against major trading parameters such as West Germany and Japan, it only fell about 9 percent against other Asian and Latin American countries.

1986 was also the year that Congress passed tax reform legislation. The purpose was to shift the tax burden from individuals to businesses in a revenue neutral package. Throughout most of the year, both consumers and businesses adjusted their spending

habits ahead of the new tax changes. Expected shifts in consumer and business spending, however, were primarily factored into the credit market during 1986.

Monetary Policy and the Federal Reserve Board

Deflationary forces and the declining velocity of money allowed the Federal Reserve and its chariman, Paul Volcker, to maintain an accommodative monetary policy throughout 1986. This task was accomplished is spite of the four Reagan appointees (Manuel Johnson, Wayne Angell, Martha Seger, and H. Robert Heller) who opted for an easier monetary stance, which they hoped would spark economic growth. Volcker, often characterized as a tight-fisted anti-inflationist, along with two allied board governors, Emmett Rice and Henry Wallich, favored a more cautionary approach. Conflicts were evident following the February 24 Federal Open Market Committee meeting. It was revealed that the members voted 4 to 3 against Volcker in favor of an immediate discount rate reduction. Volcker considered it an inopportune time for such a move, fearing that a unilateral rate cut would result in a free-fall of the U.S. dollar. Ultimately, the U.S. discount rate was reduced ten days later, following a coordinated move by Volcker with West Germany and Japan. The West German Bundesbank lowered its official interest rates the Thursday prior to the Bank of Japan's reduction on that Friday. This initial U.S. discount rate cut was the first of four that finally reduced the rate from 7½ percent at the beginning of the year to 5½ percent by December.

Although the Federal Reserve was more inclined to ease than to tighten monetary policy during 1986, the escalating growth in the basic measure of money supply ignited concern. On several occasions, the Federal Open Market Committee opted to leave monetary policy unchanged. An unchanged policy was midway between an easier stance that encouraged economic growth and a tightened stance that slowed the excessive growth in the money supply.

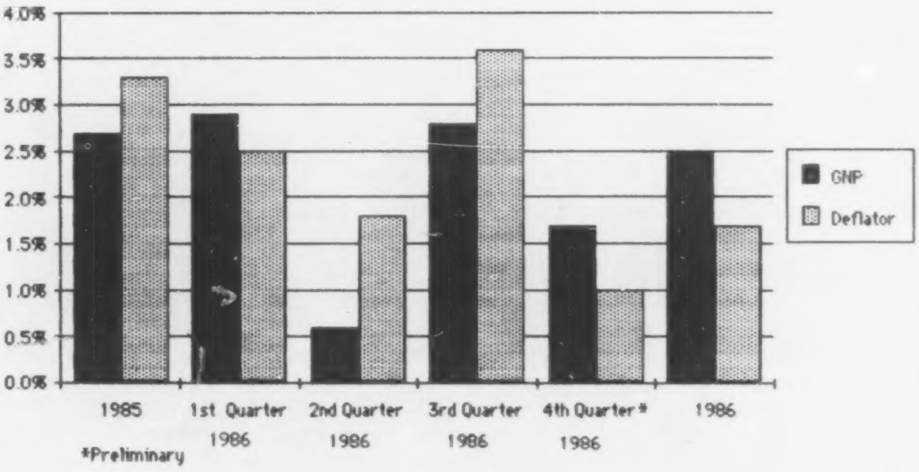
The basic measure of the money supply, M-1, was rebased in the second quarter from the 4 percent to 7 percent growth rate set in 1985. Following the July FOMC meeting, M-1 (which is currency in circulation and deposits in checking accounts) had begun to exceed its new base of 3 percent to 8 percent. The growth in M-1 was attributed to the sharp decline in interest rates which made bank rates on checking accounts a more attractive investment. The FOMC chose to concentrate on the broader money supply aggregates, M-2 and M-3, while tolerating an M-1 surge above the 8 percent upper base.

The Economy

Economic growth in 1986 was expected to expand at a faster pace than the preceding year. However, after first and second quarter GNP figures revealed lackluster performance, both the Reagan Administration and the Federal Reserve Board lowered their optimistic estimates. Inflation, on the other hand, progressed at a slow pace throughout the year.

The Gross National Product grew 2.5 percent compared to the 1985 2.7 percent advance. The Administration had originally estimated a 4 percent growth rate for 1986. The Implicit Price Deflator, a measure of inflation, rose 1.0 percent for 1986 after rising 3.3 percent in 1985. A better measure of inflation, the Fixed-Weight Price Index, rose 2.6 percent which was the lowest increase since 1967.

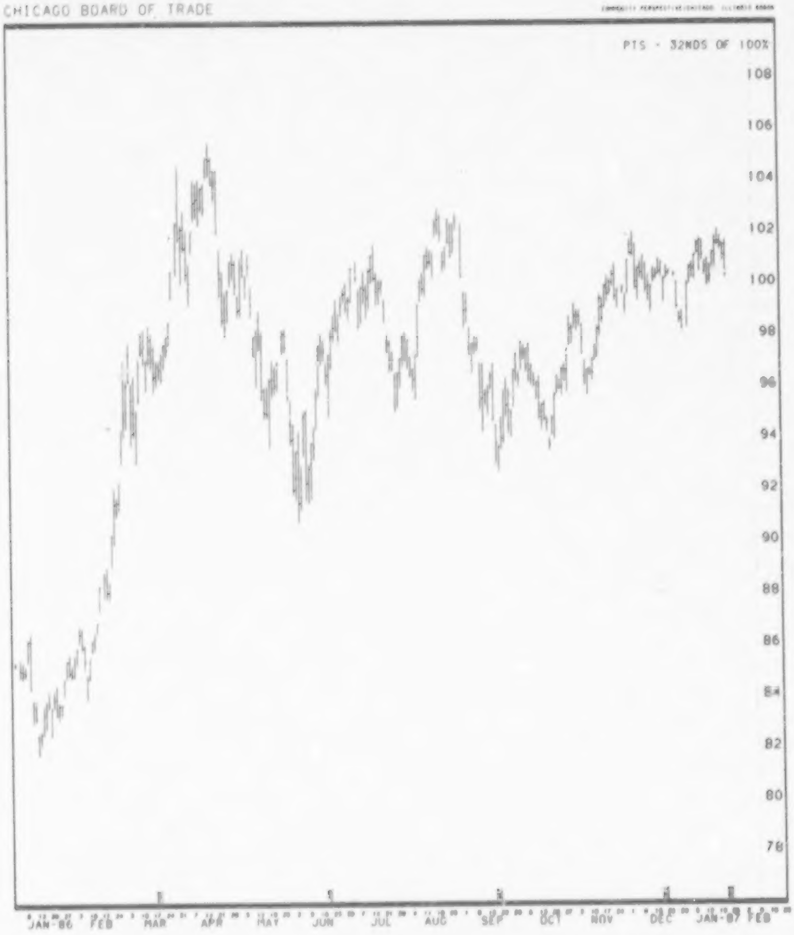
GROSS NATIONAL PRODUCT



Consumer prices rose 1.1 percent in 1986, which was the lowest increase in over 25 years. Producer prices, on the other hand, fell 2.5 percent. Both were primarily due to the plunge in energy prices.

TREASURY BONDS

DAILY NEAREST FUTURES



Energy prices began the year in a slump, declining below the "psychological" level of $15 per barrel. By the second quarter, oil prices dipped below $10 per barrel. Overproduction by the Organization of Petroleum Exporting Countries, which sought to regain eroding market shares by pushing non-OPEC nations out of the market, led to enormous stock and inventory buildup. By August, OPEC members agreed to temporarily limit production levels for a two-month trial period. This accord was extended in October since an alternative agreement could not be attained. The continuation of limited production was short-lived. A major OPEC member, Saudi Arabia, persuaded members to return to fixed prices. Following December's full member meeting, OPEC agreed to fix the price of crude oil at $18 per barrel. Inflationary fears mounted as oil prices recouped year-long losses. Interest rates rose while precious metal prices, an inflationary hedge, soared.

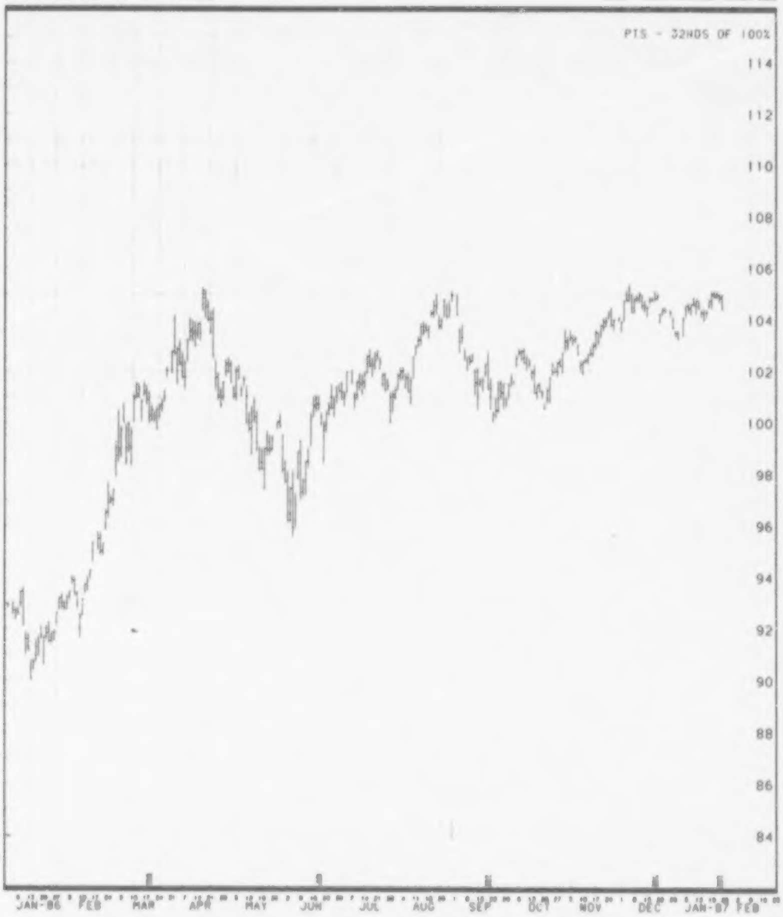
During this time, it remained evident that an economic upturn was not possible. the U.S. dollar's unyielding weakness against major foreign currencies also added to inflationary worries. A lower dollar creates higher-priced imported goods, thereby driving up inflation. Attempts by the Federal Reserve to boost the economy through its fourth and final one-half percentage point discount rate cut disappointed the credit market which had anticipated a reduction of one percentage point.

1

10 YEAR T-NOTES

DAILY NEAREST FUTURES

CHICAGO BOARD OF TRADE



Steady consumer spending was the primary factor in keeping the economy afloat. The flood of automobile financing incentives as well as the passage of tax-reform legislation fueled consumer expenditures. The elimination of sales tax and finance charges deductions convinced buyers to make purchases in 1986 instead of 1987. By year end, consumer installment credit swelled while retail sales rose moderately higher.

Total unemployment for 1986 averaged 7 percent versus a 6.9 percent average for 1985. Cost-reduction programs by several major manufacturers left many workers jobless. Furthermore, the plunge in energy prices shook many domestic oil producers out of the market. The job decline in the oil- and gas-extraction sector represented 25 percent of the industry's work force.

The 1987 economy is expected to continue at the same pace as 1986. Sustained economic expansion has been widely forecasted. Anticipation of lower interest rates, however, could be hampered by an increase in inflation. Also, a lower federal deficit along with a narrower U.S. merchandise trade balance will probably remain the focus of Congress, the President, and the Federal Reserve. However, these uncertainties will continue to cloud the direction of interest rates. Nonetheless, the highly liquid futures market as a hedging tool is expected to remain at the forefront in assisting banks and corporations to manage interest rate risks.

Futures Contracts Delivery Totals

This section lists daily and monthly delivery totals for each futures contract traded, except for cash-settled contracts. Also listed are the last date that deliveries were assigned.
